Oncternal Therapeutics

Title of Project: A Phase 1/2 Study of ONCT-534 In Subjects with Metastatic Castration-Resistant Prostate Cancer

Principal Investigator: Robert Investigator, MD

Other Investigators:

Participant ID: _____

Clinical Study Site: XYZ Clinical Research

Introduction:

We formally invite you to participate in a research study conducted by Oncternal Therapeutics: A Phase 1/2 Study of ONCT-534 in Subjects with Metastatic Castration-Resistant Prostate Cancer. This study aims to identify an effective treatment to advanced forms of prostate cancer that are highly resistant to metastatic castration therapies such as androgen deprivation therapy (ADT). Participation in this study is entirely voluntary, and we strongly recommend you discuss any further questions you may have about the study, condition, or the institution with our staff members. Please take your time with this decision, and if you are willing to participate, please sign this form.

Approximately 27 people are expected to take part in this research study for Phase I. The study will move to a two-dose level design for Phase 2, with an estimated 16 participants per dose for a total of 32 participants expected for Phase 2, totaling 59 participants for this study.

Should you decide to take part in this study, your participation is expected to last approximately 108 weeks (~2 years).

Section 1. Purpose of the Research

The purpose of this research study is to obtain information on the safety and effectiveness of ONCT-534, an investigational drug developed by Oncternal Therapeutics to treat participants with metastatic castration-resistant prostate cancer.

You are being offered the opportunity to take part in this research study based on your diagnosis of prostate cancer, with indications of previous treatment plans not being effective.

Section 2. Procedures

As stated above in the Introduction, this study and all related procedures within this study are expected to take 108 weeks, for both Phase I (Dose Escalation) and Phase II (Dose

Expansion). Multiple visits will be taking place throughout the course of this study, during which several assessments will be conducted to evaluate medical response and vital signs:

- Physical examination
- Weight & vital signs
- 12-lead Electrocardiogram (ECG)
- Clinical chemistry
- Prostate-specific antigen
- Clinical hematology & coagulation
- Urinalysis
- **In-clinic administration of ONCT-534**
- Blood samples for pharmacokinetics and biomarkers
- CT scans (chest/abdomen and pelvis)
- Bone scans
- Evaluation of adverse events & concomitant medications/therapies
- Tumor biopsy (optional)

Taking ONCT-534

ONCT-534 is a tablet you swallow with a small amount of water. Take it once a day, at the same time each day, **at least 2 hours after eating and at least 1 hour before eating.**

The tablets come in two strengths, 40 mg and 200 mg. Both are scored, which means they can be broken in half if the study doctor asks you to take a smaller amount.

Store your tablets at room temperature in a safe place, away from extreme heat or cold. Keep them in the bottle they came in until you use them.

Bring your empty bottles and any unused tablets with you to every visit, so the study team can keep track of the medicine.

Study Visits

If you join this study, your visits will be:

- **Screening:** up to 28 days before you start treatment, to see if you can join
- **First two weeks:** visits on Day 0 (your first dose), Day 1, Day 14, and Day 15. On Day 0 and Day 14 you will stay at the clinic for about 6 hours for blood tests.
- **Weeks 4 through 24:** visits at Week 4, Week 6, Week 8, Week 12, Week 16, Week 20, and Week 24
- **After Week 24:** visits every 12 weeks until Week 108
- **End of treatment:** a final visit at about Week 108, or sooner if you stop early
- **Follow-up:** a phone call about 30 days after your last dose

On most days you will take ONCT-534 at home. On certain visit days you will be asked **not** to take your dose at home, because it will be given to you at the clinic so blood samples can be collected.

Section 3. Time Duration of the Procedures and Study

Both the Dose Escalation (Phase I) and Dose Expansion (Phase II) segments of this study are expected to last approximately two years. Meaning, should you choose to participate in this study, please expect to be in treatment with the investigational drug and participate in our clinical practices for about 108 weeks. Following pre-screening and introductory visits (to administer first doses of ONCT-534), you will be asked to return to the clinic based on the schedule listed in section 2 above for routine procedures and dosing as applicable.

Section 4. Discomforts and Risks

Being in this study may involve risks. Some risks are known. Others are not known yet. Please read this section carefully and ask the study doctor about anything you do not understand.

What is known about ONCT-534 so far

ONCT-534 is an investigational drug. This means it has not been approved by the U.S. Food and Drug Administration. **No person has ever taken ONCT-534 before.** You would be among the first. Because of this, everything known about its possible effects comes from laboratory studies and from studies in mice and dogs. One of the main purposes of this study is to find out what side effects ONCT-534 causes in people, and what dose is safe.

What animal studies showed

In 28-day studies in mice and dogs, ONCT-534 affected three parts of the body:

Liver. Animals had increased liver weight and changes in liver cells. Blood tests in the animals did not show liver problems. Most of these changes went away after the animals stopped taking the drug.

Kidney. Animals had damage to the filtering units of the kidney and to the small tubes inside the kidney. Most of these changes went away after the animals stopped taking the drug.

Prostate and testicles. Animals had smaller prostates, less prostate fluid, and changes in cells inside the testicles. These changes went away after the animals stopped taking the drug. These effects are expected, because of the way ONCT-534 works against male hormones.

Because of the liver and kidney findings, the study doctor will test your blood regularly to check how your liver and kidneys are working. People with moderate or severe liver or kidney problems cannot join this study.

What is known about similar drugs

ONCT-534 belongs to a group of drugs that block male hormones. Approved drugs in this group include enzalutamide, apalutamide, and darolutamide.

Seizures. Some people taking these approved drugs have had seizures. This happened in about 4 to 6 out of every 1,000 people. Among people who had other conditions that make seizures more likely, it happened in about 22 out of every 1,000 people.

In the animal studies, ONCT-534 did not cause seizures. To lower this risk further, people who have had seizures before, and people whose cancer has spread to the brain, cannot join this study.

Tell the study doctor right away if you have a seizure or feel that one may be coming.

Risk from sunlight

Laboratory testing showed that ONCT-534 absorbs the kind of light found in natural sunlight. This may make your skin more sensitive to light.

While you are taking ONCT-534, and for 1 month after your last dose, you must:

- Avoid spending long periods in the sun
- Cover up outdoors with long sleeves and a hat
- Use sunscreen
- Avoid tanning salons and light therapy (phototherapy)

Risks related to the dose you receive

Different people in this study will receive different doses of ONCT-534. The planned doses are 40, 80, 160, 300, and 600 mg taken by mouth once a day. The first people to join receive the lowest dose. If that dose appears safe, the next group receives a higher dose.

You cannot choose your dose. The dose you receive depends on when you join the study.

If you receive a lower dose, it may be too low to have any effect on your cancer. If you receive a higher dose, you may be more likely to have side effects, including side effects that have not been seen before. **The highest dose that people can safely take has not been determined yet. Finding that dose is one of the main purposes of this study.**

Later in the study, if higher doses have been found to be safe, you may be offered the chance to move to a higher dose. This is your choice.

Risks of the study procedures

Blood draws. You will have many blood draws, especially in the first two weeks. On your first day of treatment and again on Day 14, blood will be taken before your dose and then

five more times over the following six hours. You may have pain, bruising, bleeding, or swelling where the needle goes in. You may feel dizzy or faint. There is a small risk of infection.

CT scans and bone scans. These scans use radiation. You will have about five sets of scans over the two years of the study. Radiation adds up over time and may slightly increase your risk of developing a cancer later in life. Some CT scans use a dye given through a vein. Some people have allergic reactions to this dye.

Heart tracings (ECG). You will have ECGs at several visits, and on some days three tracings in a row. The sticky pads placed on your skin may cause redness or itching.

Tumor biopsy (optional). You may be asked to have a biopsy, where a doctor uses a needle to take a small piece of your tumor. You may have pain, bleeding, bruising, or infection where the needle goes in. Depending on where your tumor is, more serious problems can happen, though this is rare. **Biopsies are optional. You do not have to agree to a biopsy to be in this study.**

Screening blood tests for infection. Before you can join, you will be tested for HIV, hepatitis B, and hepatitis C. If you have questions about these tests or what happens to the results, ask the study doctor before you sign this form.

Risks related to fertility and pregnancy

ONCT-534 may harm an unborn baby. It is not known whether ONCT-534 affects sperm or your ability to father a child.

While you are taking ONCT-534, and for **3 months** after your last dose, you must:

- Not donate semen
- Unless you have had a vasectomy, an orchiectomy (removal of the testicles), or a radical prostatectomy: either avoid sex completely, or use a condom with spermicide with any female partner who could become pregnant
- Ask any partner who could become pregnant to also use a highly effective method of birth control

Tell the study doctor right away if your partner becomes pregnant during the study or within 3 months after your last dose. The study team will ask for permission to follow the pregnancy until the baby is born.

Risks from other medicines and foods

ONCT-534 can interact with other medicines. Some medicines cannot be taken during this study. Tell the study doctor about every medicine, vitamin, supplement, and herbal product you take, including anything you buy without a prescription.

Grapefruit, Seville oranges, and their juices can affect how your body handles ONCT-534. If you eat or drink these, do so either 2 hours before or 8 hours after your dose.

Risks we do not know about yet

Because no person has taken ONCT-534 before, there may be side effects that no one knows about. Some of these could be serious. Some could cause death.

A Safety Review Committee will look at the safety information from this study as it comes in. If any new risks of ONCT-534 are identified or encountered during the course of this study, the study doctor will tell you, and you may be asked to sign a new consent form.

Risk to your privacy

We will do our best to keep your information private, as described in Section 7. But we cannot promise complete privacy. There is a small risk that your information could be seen by someone who should not see it.

Section 5. Potential Benefits

You may not get any direct benefit from being in this study. Your cancer may not get better. It may get worse.

No person has taken ONCT-534 before. Everything researchers expect about how it might work comes from laboratory studies and studies in animals. In those studies, ONCT-534 slowed the growth of prostate cancers that no longer responded to approved hormone-blocking drugs. Whether it will do the same in people is unknown.

The first part of this study is mainly designed to find a safe dose, not to treat your cancer.

Some people in early studies like this one find that their cancer shrinks or stops growing for a while. Others do not. There is no way to know ahead of time what will happen for you.

What researchers learn from this study may help doctors treat other people with prostate cancer in the future.

Section 6. Other Choices Beyond this Study

You do not have to join this study to get treatment for your prostate cancer. You should talk with your doctor about all of your choices before you decide.

Depending on your situation, other choices may include:

- **Other hormone-blocking medicines** that work in a different way than the one you have already taken, such as enzalutamide (XTANDI), apalutamide (ERLEADA), darolutamide (NUBEQA), or abiraterone (ZYTIGA)
- **Chemotherapy**, such as docetaxel or cabazitaxel
- **Radium-223**, a treatment for cancer that has spread to the bone

- **Lutetium-177 PSMA therapy**, which delivers radiation directly to prostate cancer cells
- **Sipuleucel-T**, a treatment made from your own immune cells
- **A medicine called a PARP inhibitor**, if testing shows your cancer has certain gene changes
- **A different research study**
- **Choosing not to have more cancer treatment**, and instead having care that focuses on comfort and quality of life. This is sometimes called supportive care or palliative care.

Not all of these choices may be right for you. Your doctor can explain which ones apply to your situation and what the possible benefits and risks of each would be.

If your cancer gets worse while you are in this study but you and the study doctor agree you should keep taking ONCT-534, you will be asked to sign another consent form first. That form will list the approved treatments you would be giving up by staying in the study.

If you decide not to join this study, it will not affect the care you receive or any benefits you are otherwise entitled to.

Section 7. Statement of Confidentiality

A description of this clinical trial will be available on <http://www.clinicaltrials.gov>, as required by U.S. law. This website will not include information that can identify you. At most, the website will include a summary of the results. You can search the website at any time.

Your research records that are reviewed, stored, and analyzed at our clinical facility will be kept in a secured area on-site, available primarily to the principal investigator. Alongside your records, any samples collected during the course of this study will be appropriately labeled with a subject number (your identifier) and stored in our laboratory securely. For our clinical facility's reference alone, your initials will also be placed on the sample labels and records.

In the event of any publication or presentation resulting from the research, no personally identifiable information will be shared.

We will keep your participation in this research study confidential to the extent permitted by law. However, it is possible that other people may become aware of your participation in this study. For example, the following people or groups may inspect and copy records pertaining to this study:

- The U.S. Food and Drug Administration and the Office of Human Research Protections, both entities of the U.S. Department of Health & Human Services
- The Oncternal Therapeutics Institutional Review Board (a committee that reviews and approves research studies)
- The Oncternal Therapeutics Human Subjects Protection Office

- The National Institute on Aging, the funding agency, and its authorized representatives.

Some records will contain information that personally identifies you. Reasonable efforts will be made to keep your personal information on these records private and confidential, however absolute confidentiality cannot be guaranteed.

Section 8. Costs and Payment for Participation and Research-Related Injury

If you are injured or become ill as a direct result of taking part in this study, get medical treatment right away. Contact the study doctor at the number listed in Section 12.

Oncternal Therapeutics will pay the standard charges for medical treatment of injuries or complications caused by the study drug, or by a procedure or test required by this study.

You will not lose any of your legal rights by signing this form.

Section 9. Compensation for Participation

You will not receive any compensation for participation in this research study.

Section 10. Research Funding

This study is paid for by Oncternal Therapeutics, Inc., the company that makes ONCT-534. Oncternal Therapeutics designed the study and will receive the results.

Oncternal Therapeutics is paying XYZ Clinical Research to conduct this study. This payment covers the costs of running the study, including staff time, tests, and procedures.

If you have questions about how this study is paid for, you may ask the study doctor or contact the IRB using the information in Section 12.

Section 11. Voluntary Participation

Taking part in this research study is voluntary. If you choose to take part in this research, your major responsibilities will include adherence to the investigational drug and its dosing schedule. You do not have to participate in this research. If you choose to take part, you have the right to stop at any time. If you decide not to participate or if you decide to stop taking part in the research at a later date, there will be no penalty or loss of benefits to which you are otherwise entitled.

If you will be participating in another clinical trial at XYZ Clinical Research or elsewhere while in this research, you should discuss the procedures and/or treatments with your physician or the investigators. This precaution is intended to protect you from possible side effects from interactions of research drugs, treatments or testing.

During the course of the research you will be provided with any significant new findings that may affect your willingness to continue participating in this research.

The study doctor may take you out of this study without your permission if:

- Your cancer gets worse and the treatment is no longer helping you
- You have side effects that are too severe to continue
- You are not able to follow the study requirements
- Oncternal Therapeutics stops the study

If you leave the study for any reason, you will be asked to come in for an end-of-treatment visit as soon as possible, and the study team will contact you about 30 days after your last dose to check on your health.

Section 12. Contact Information for Questions or Concerns

You have the right to ask any questions you may have about this research. If you have questions, complaints or concerns or believe you may have developed an injury related to this research, contact Robert Investigator, MD at 123-456-7890 or the doctor on 24-hour call at 987-654-3210.

If you have questions regarding your rights as a research participant or you have concerns or general questions about the research, or about your privacy and the use of your personal health information, contact the research subjects protection advocate in the XYZ Clinical Research Protection Office. You may also contact them if you cannot reach the research team or wish to talk to someone else.

For more information about participation in a research study and about the Institutional Review Board (IRB), a group of people who review the research to protect your rights, please visit the XYZ Clinical Research's IRB web site. Included on this web site, under the heading "Participant Info", you can access federal regulations and information about the protection of human research participants. If you do not have access to the internet, copies of these federal regulations are available by contacting XYZ Clinical Research.

Signature and Consent/Permission to be in the Research

Before making the decision regarding enrollment in this research you should have:

- Discussed this study with an investigator,
- Reviewed the information in this form, and
- Had the opportunity to ask any questions you may have.

Your signature below means that you have received this information, have asked the questions you currently have about the research and those questions have been answered. You will receive a copy of the signed and dated form to keep for future reference.

Participant: By signing this consent form, you indicate that you are voluntarily choosing to take part in this research.

<u>[Signature of participant]</u>	<u>[date]</u>	<u>[time]</u>	<u>[print name]</u>
Signature of Participant	Date	Time	Printed Name

Participant's Legally Authorized Representative: By signing below, you indicate that you give permission for the participant to take part in this research.

<u>[Signature of participant]</u>	<u>[date]</u>	<u>[time]</u>	<u>[print name]</u>
Signature of Participant's Legally Authorized Representative	Date	Time	Printed Name

(Signature of Participant's Legally Authorized Representative is required for people unable to give consent for themselves.)

Description of the Legally Authorized Representative's Authority to Act for Participant:

[Description of the authority]

Person Explaining the Research: Your signature below means that you have explained the research to the participant/participant representative and have answered any questions he/she has about the research.

<u>[Signature of participant]</u>	<u>[date]</u>	<u>[time]</u>	<u>[print name]</u>
Signature of person who explained this research	Date	Time	Printed Name

Only approved investigators for this research may explain the research and obtain informed consent.

A witness or witness/translator is required when the participant cannot read the consent document, and it was read or translated.

INSTRUCTIONS: The following applies to optional parts of the research only, e.g., storage of leftover tissue for future research, optional sub-studies, etc.

In addition to the main part of the research study, there is an optional part of the research. You can participate in the main part of the research without agreeing to take part in this optional part.

Optional Tissue Storage for Future Use

As part of this study, we are obtaining blood samples from you. If you agree, the research site would like to store leftover samples of your blood so that they can be studied in the future after this study is over. These future studies may provide additional information that will be helpful for this future research, but it is unlikely that these studies will have a direct benefit to you. The results of these tests will not have an effect on your care. Neither the investigator nor you will receive results of these future research tests, nor will the results be put in your health record. Sometimes tissue is used for genetic research about diseases that are passed on in families. Even if your samples are used for this kind of research, the results will not be put in your health records. It is possible that your samples might be used to develop products or tests that could be patented and licensed. There are no plans to provide financial compensation to you should this occur. If you have any questions, contact your study doctor.

If you consent to the collection of blood samples for future research, the period for the use of the samples is unknown. If you agree to allow your blood samples to be kept for future research, you will be free to change your mind at any time. You should contact your clinical research site and your study doctor know you wish to withdraw your permission for your samples to be used for future research. Any unused samples will be destroyed and not used for future research studies.

Your samples will not be labeled with any of your personal information, such as your name or a code number. Once you give your permission to have your leftover samples stored, they will be available for use in future research studies indefinitely and cannot be removed due to the inability to identify them.

You should initial below to indicate your preferences regarding the optional storage of your leftover samples for future research studies.

- a. Your sample(s) may be stored and used for future research studies to learn about, prevent, treat or cure (*disease/condition*).

_____ Yes _____ No

- b. Your sample[s] may be stored and used for research about other health problems.

_____ Yes _____ No

- c. Your sample(s) may be shared with other investigator/groups without any identifying information.

_____ Yes _____ No

Participant: By signing below, you indicate that you have read the information written above and have indicated your choices for the optional part of the research study.

<u>[Signature of participant]</u>	<u>[date]</u>	<u>[time]</u>	<u>[print name]</u>
Signature of Participant	Date	Time	Printed Name

Participant's Legally Authorized Representative: By signing below, you indicate that you have read the information written above and have indicated your choices for the optional part of the research study.

<u>[Signature of participant]</u>	<u>[date]</u>	<u>[time]</u>	<u>[print name]</u>
Signature of Participant's Legally Authorized Representative	Date	Time	Printed Name

(Signature of Participant's Legally Authorized Representative is required for people unable to give consent for themselves.)

Description of the Legally Authorized Representative's Authority to Act for Participant:

[Description of the authority]

Person Explaining the Research: Your signature below means that you have explained the optional part of the research to the participant/participant representative and have answered any questions he/she has about the research.

<u>[Signature of participant]</u>	<u>[date]</u>	<u>[time]</u>	<u>[print name]</u>
Signature of person who explained this research	Date	Time	Printed Name

Authorization to Use or Disclose (Release) Health Information that Identifies You for the Research Study

REQUIRED ELEMENTS:

If you sign this document, you give permission to the study doctor and research team at [Study Institution] to use or disclose (release) your health information that identifies you for the research study.

The health information that we may use or disclose (release) for this research includes:

- Name
- Address
- Phone number
- Date of birth
- Medical history
- Data collected during your participation in study visits, including all test results

The health information listed above may be used by and/or disclosed (released) to the following authorized users:

- Representatives of The National Institute on Aging, the funding agency, and its authorized representatives
- Representatives of *[CRO name]*.
- Representatives of *[IRB name]* (an Institutional Review Board that reviews this study).
- The Food and Drug Administration (FDA and other US federal and state agencies.
- Government agencies to whom certain diseases (like HIV, hepatitis, and STDs) must be reported.
- Governmental agencies of other countries.
- Outside individuals and companies, such as laboratories and data storage companies, that work with the researchers and need to access your information to conduct this study.
- Other research doctors and medical centers participating in this research, if applicable.
- A data safety monitoring board which oversees this research, if applicable.

Once your health data has been shared with authorized users, it may no longer be protected by federal privacy law and could possibly be used or disclosed in ways other than those listed here.

Please note that:

- You do not have to sign this Authorization, but if you do not, you may not receive research-related treatment.
You may change your mind and revoke (take back) this Authorization at any time. Even if you revoke this Authorization, the study team may still use or disclose health information they already have obtained about you as necessary to maintain the integrity or reliability of the current research. To revoke this Authorization, you must write to: [name of the Study PI) and contact information].
This Authorization does not have an expiration date [or as appropriate, insert expiration date or event, such as "end of the research study."]

Signature of participant or participant's personal representative

Date

Printed name of participant or participant's personal representative

If applicable, a description of the personal representative's authority to sign for the participant
